How to calculate your daily sickness allowance (EKT) contribution:

1. From the attached table, please select the line that corresponds to the age you will reach this year.
2. Then divide your daily EKT rate by 10. (instructions on calculating the daily rate can be found in the sample application form)
3. Multiply the table value by the number of €10 units of your desired daily sickness allowance.
4. You receive the total monthly amount for your contribution to the daily sickness allowance.

Example calculation 1:

You have calculated a daily sickness allowance rate of €150 and are turning 35 this year.

1. The contribution per €10 unit is €0.96.
2. $150\text{€}/10$ corresponds to 15 €10 units.
3. Please multiply €0.96 by 15.
4. The total monthly contribution for your daily sickness allowance is €14.40.

Example calculation 2:

You have calculated a daily sickness allowance rate of €90 and reach the age of 52 this year.

1. The contribution per €10 unit is €1.86.
2. $90\text{€}/10$ corresponds to 9 €10 units.
3. Please multiply €1.86 by 9.
4. The total monthly contribution for your daily sickness benefit is €16.74.
